Copilot Training:
The Foundation of Efficiency

pro·duhk·tiv

81% of organizations using Microsoft Copilot report increased productivity[1], and you can too when you invest in training! We help equip users with the skills they need to seamlessly integrate and maximize the benefits of Copilot from day one.

Why should you invest in Copilot training?

With our hands-on training, your team will quickly master Copilot, leading to more efficient workflows and a smoother integration process. Let's explore how:

	Without training	With training
Productivity	Most users do not realize the capabilities Copilot has for assisting with day-to-day tasks that take up time better used on more important work.[2]	We ensure your users are exposed to how Copilot can be used for everyday tasks so that they can focus their time on projects and strategic activities.
User Adoption	We've found that many users on the first day of our trainings are not fully adopting Copilot - using it for only one to two tasks.	Studies show that orgs that invested in training see more widespread adoption.[2] We'll ensure your users want to use the tool.
Cost Savings	Without exposure, users often don't realize how Copilot can streamline tasks and boost productivity in their specific roles.	Our role-based sessions show users how to efficiently complete jobs to save money on operational tasks in the long run.

The pro•duhk•tiv Experience

Training to fit users' schedules
Our goal is training that doesn't impact full workdays. Whether virtual or in-person, return to work right where you left off.

Engaging hands-on demos
This is time for trial and error. Experiencing problems or have questions? Tell us and get help in real-time.

Job roles in action
Choose role-based sessions for your org. and users decide which to join to see how Copilot can help them directly.
